

Canadian Submarine Technologies Inc.

Canadian Submarine Technologies Inc. (CSTI) Defines the Future of “Submarine” Technologies for Homeland Security and Law Enforcement. Unveils New Rapid Response Manned Submersible (RRMS) Technologies at Securport2004 Western Hemispheric Port Security Conference in Miami February 24-27.

Leader in Submarine and Submersible Technologies Unveils New Rapid Response Manned Submersible (RRMS). Technology Will Significantly Advance Manned Underwater Security, Interdiction and Surveillance Capabilities of Government, Law Enforcement and Commercial Shipping Operations in Worldwide Ports and Waterways.

Miami, Florida February 24 - - Canadian Submarine Technologies Inc. unveiled its RRMS manned submersible and introduced its technology partners at SecurePort2004 in Miami. With over twenty years of submersible design, development and deployment experience CSTI has designed the RRMS submarine to address the manned submersible needs of Government, Law Enforcement and the Commercial and Cruise Line Shipping Industry. The RRMS is capable of integrating a wide variety of technologies that provide imaging, chemical and biohazard sensing and a variety of sonar and communications capabilities.

Building upon the companies twenty plus years of experience using ambient pressure submarine technology and along with its strategic alliance partners CSTI has developed the RRMS.

“As currently designed it is the only operational ambient pressure submersible of its kind available in the world today” said Richard “Dick” Barker CEO and President CSTI.

“The RRMS is uniquely designed to carry a large array of sophisticated mission specific systems along with the ability to exit the vehicle at depth, provide the user with a highly mobile, manned, rapid response, intervention, and data recovery platform.”

For Release 9 a.m. EDT, February 24, 2004

more

Government, Law Enforcement and the Commercial Shipping Industry are actively seeking companies that provide defensive technologies. CSTI focuses on integrating tools for detection and protection in ports and waterways such as ship surveillance and monitoring, digital imaging, chemical and biohazard sensing, and sonar surveillance and mapping. Existing markets that would also benefit greatly from the use of CSTI's RRMS are commercial hull inspection, shallow water oil, and gas and transmission cable companies.

"With the relative low price point, this system is an exciting and greatly advanced system as compared to current SDV's (Swimmer Delivery Vehicles) which require full scuba to be worn, including tanks, regulators and masks"" Law Enforcement and Homeland Security have many fronts in the battle against terrorism and crime. We are pleased to respond by providing new technologies that can have an immediate impact in our ports and waterways." said Daniel J. Abens Vice President Marketing CSTI.

About Canadian Submarine Technologies Inc.

CSTI (www.canadiansub.com) is a leading company in submersible technologies based in Vancouver British Columbia with offices in the US and Canada providing new manned submersible technologies for ports and waterways worldwide. Canadian Submarine Technologies Inc. was founded in 1998 by Richard R. Barker and is privately held. Mr. Barker has been involved in the construction of more than half of the tour submersibles operating worldwide. In addition to the highly successful Atlantis and Odyssey tour submarines, Mr. Barker was also involved in the development of three other personal submersibles, the SportSub, Mantaray, and the MDB Mobile Diving Bell. Mr. Barker was also a founding partner in U.S. Submarines Inc. Canadian Submarine Technologies Inc. has strong corporate relationships with International Submarine Engineering a world leader in submarine technology, and with SubSea Systems a world leader in the introduction of innovative sub sea products.
